Isaac Lin

(626) 560-8943 | lin.isaac.3607@gmail.com | linkedin.com/in/isaaclin04 | github.com/lucanren

Education

Carnegie Mellon University School of Computer Science May 2026
B.S. in Computer Science, Concentration in Machine Learning *Pittsburgh, PA*
GPA: 3.94/4.0 (Dean's List, High Honors)

Coursework: Advanced Algorithms Analysis, Convex Optimization, Deep Learning, Machine Learning, Distributed Systems, Theoretical Computer Science, Probability Theory, Computer Systems, Functional Programming, Data Structures and Algorithms, Discrete Mathematics, Differential Equations, Linear Algebra, Multivariable Calculus

Work Experience

Apple May 2025 – Present
ML Research Scientist Intern *Sunnyvale, CA*
- Computer vision algorithms research at Vision Products Group and Video Computer Vision Team
- Developed algorithmic solutions applying machine learning to numerically optimize calibration of dynamic camera systems
- Researched mathematical models for geometric signal processing and multi-view rendering of vision products

TikTok Feb 2025 – April 2025
Software Engineer Intern *San Jose, CA*
- Developed end-to-end OpenAPI functionalities for intake, provisioning, and allocation of NoSQL databases within a distributed architecture, supporting infrastructure as code (IaC) for efficient storage partitioning and management
- Designed infrastructure pipeline enabling isolated developer environments across Redis and MongoDB provisioning workflows

Amazon May 2024 – August 2024
Software Development Engineer Intern *Seattle, WA*
- Expanded end-to-end automation of AWS deals management console to support the onboarding of diverse pricing structures for private customers using EC2, streamlining deployment and management processes of custom deals
- Enhanced console frontend (ReactJS) and backend APIs (AWS Lambda) to improve user experience and reduce latency
- Expedited turnaround time over 200% by removing the need to cut manual tickets consuming oncall resources from 5+ teams

NASA May 2023 – August 2023
Software Engineer Intern *Greenbelt, MD*
- Developed full-stack .NET application to map thermal contour data onto physical models of the Roman Space Telescope
- Deployed automation workflow, reducing analysis overhead for 15+ modeling teams and 100+ thermal engineers

Research Experience

Carnegie Mellon University Robotics Institute November 2024 – Present
Computer Vision Research, Supervised by Prof. Shubham Tulsiani *Pittsburgh, PA*
- Researched machine learning methods for 3D vision, focusing on improving novel view synthesis, multi-view reconstruction, and camera pose estimation through generative modeling and self-supervised learning
- Implemented diffusion and regression based frameworks to enhance point cloud fidelity and geometric structure integrity

Carnegie Mellon University Computer Science Department October 2022 – Present
Deep Learning Research, Supervised by Prof. Tai Sing Lee *Pittsburgh, PA*
- Developed deep learning models for neural prediction, leveraging self-attention to improve understanding of visual context
- Investigated the complementary contributions of focal and peripheral information in visual perception, proposing an incremental training framework for learning center-surround interactions in deep networks; work accepted at ICLR 2025

Penn State University College of Medicine August 2020 – April 2022
Research Assistant, Supervised by Prof. Li Wang *Remote*
- Multivariate statistical analyses to determine association between ASD and socioeconomic predictors

U.S. Food and Drug Administration June 2021 – August 2021
Research Fellow, Supervised by Dr. Joshua Pfefer *White Oak, MD*
- Investigated the impact of skin pigmentation on biomedical optics devices for hyperspectral imaging technologies
